Drive-Based Motion Controller
Automation1 iXC4

Motion. Control. Together.

The Automation1 iXC4 PWM servo motor drive with integrated motion controller is two solutions in one: it's capable of complete machine control and provides sub-nanometer levels of servo motor control. The powerful Automation1-iSMC motion controller is loaded onto the same hardware that runs the drive, which in turn manages the trajectory of up to 12 axes of control over the HyperWire motion bus. The iXC4 is the powerful center of your motion control architecture. It has a full motion controller, connects to other Automation1 drives over HyperWire and connects to other automation devices over EtherCAT, Modbus TCP/IP or a TCP Socket interface. Multi-axis Part-Speed PSO enables precision control of your industrial laser or process tool synchronized with your motion trajectory.

Automation1

The iXC4 is a part of the user-friendly Automation1 motion control platform, which includes the following:

◆ **Development Software**

◆ **Controls**

◆ **Motor Drives**

◆ **Fiber-Optic HyperWire® Communication Bus**

KEY FEATURES:

◆ Unlock the full **MOTION CONTROL** power of our Automation1-iSMC intelligent software-based motion controller

◆ Features **COMPLETE CONFIGURATION & PERFORMANCE** capability of XC4 servo motor drive

◆ **CONNECT TO THE CONTROLLER** using EtherCAT, Modbus or a Socket interface.

◆ Enjoy up to **12 AXES OF CONTROL** by connecting more Automation1 drives over the HyperWire fiber-optic bus

◆ **EXPAND YOUR I/O** by adding expansion board to the iXC4 or to other connected drives

Note:

1. See the Automation1-iSMC controller page for more information.
2. For stepper motors only, one-half of bus voltage is applied across the motor (e.g 80 VDC supply results in 40 VDC across stepper motor).
3. Output voltage depends on input voltage.
4. Peak value of the sine wave; rms current for AC motors is 0.707 A_{pk}.
5. Maximum achievable continuous output current depends on the thermal conditions of the drive.
6. Encoder feedback-based PSO requires the -MX0 multiplier option.
