

AEROTECH AUTOMATION1

Motion & Servo Controller **Automation1 iX14**

Phenomenal Control Power

Take full control of your machine or motion system with the Automation1-iX14 motion and servo controller. The iX14 can concurrently control up to four servo control loops and run the complete Automation1-iSMC intelligent software-based motion controller. Designed to control analog transconductance amplifiers, the iX14 can apply servo control to any motion control driver with an analog input control option. Add industrial Ethernet support via the iSMC configuration to enable additional I/O via the device's standard industrial Ethernet ports.

Each axis of control includes encoder and axis feedback signals and an independent 20 kHz servo control loop.

Automation1

The iX14 is a part of the user-friendly Automation1 motion control platform, which includes the following:

- ◆ **Development Software**
- ◆ **Controls**
- ◆ **Motor Drives**
- ◆ **Fiber-Optic HyperWire® Communication Bus**

KEY FEATURES:

- ◆ Unlocks the full **MOTION CONTROL** power of our Automation1-iSMC intelligent software-based motion controller
- ◆ Features **COMPLETE CONFIGURATION & PERFORMANCE** capability of the X14 servo controller
- ◆ **ELIMINATES THE PC** from your control scheme
- ◆ Enables up to **12 AXES OF CONTROL** when more Automation1 drives are connected over the HyperWire fiber-optic bus
